Subject: Re: Lancet Oncology editorial - When is a carcinogen not a carcinogen (talc and glyphosate)

Hello everyone—This is very sad, especially the concluding insinuation that IARC includes conflicted individuals and inappropriate influences. We addressed that issue strongly while I was there, and the same Lancet Oncology editor called our process a "model for other public agencies" (TLO 6:735, 2005).

By the way, the numerous case-control studies of ovarian cancer and talc are remarkably consistent. The evaluation was tempered by the null result in the Women's Health Study, the only cohort study to address the topic. Group 2B (possible) is appropriate (see IARC vol 93 online).

Vince
